

### 2. PROMASEAL® Intumescent or Silicone Sealants

Intumescent or silicone based products have excellent adhesive properties for sealing of joints and service penetrations for up to 240 minutes fire resistance when tested to BS 476: Part 20: 1987.

They bond to dust-free masonry, concrete, calcium silicate board, plasterboard, metal and cable coverings and remain flexible after curing to accommodate thermal movement.

Supplied in 310ml cartridges.

Material safety data sheets are available upon request.

#### Applications

- Closes gaps around M & E services, fire resistant glazing, floor and masonry wall joints and partition joints.
