

## Camden Cotton Mills

DuraDuct™ Model GNX

This project, located in Mecklenburg county North Carolina, required additional fresh air to be supplied to the building when higher than acceptable levels of radon was detected in the concrete. In this retrofit project where space was at a premium, DuraDuct™ GNX proved to be the best solution. Approved for use by the county, the DuraDuct's unique and patented blend of impact resistant and space savings brought the required air into the building.

The DuraDuct™ GNX fire rated duct provided the 2-hour fire rating, without the need for fire dampers, that was required as the duct penetrated the floor. This UL/ULC listed product is the only fire rated duct assembly that does not require additional wraps or enclosures

Located in the heart of uptown Charlotte, this luxury community features contemporary, urban details with upscale amenities. Camden Cotton Mills' loft-style apartment homes offer the latest lifestyle trends including stained concrete, hardwood floors, and exposed ceilings and ductwork. Covered parking, a fitness center, and a resident business center are all featured in the community
