

A DuraBlast Barrier protecting control panels.

DuraBlast Barrier

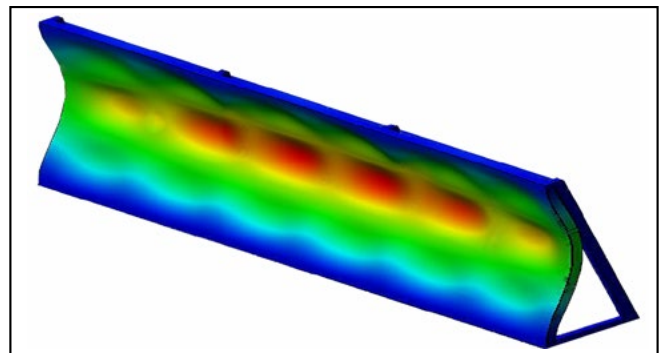

Exterior Fire & Blast Separation Barrier

The DuraBlast Barrier is a modular barrier designed to meet customer specified blast loads.

The processing of chemicals, oil & gas and other industrial materials can create dangerous situations where explosions may occur. These explosions can have devastating consequences for personnel, property and shareholders. It is imperative that industrial operations identify all these potentially explosive situations and take steps to mitigate the dangers.

To help companies mitigate these dangers, DuraSystems has designed the DuraBlast Barrier. The DuraBlast Barrier features 6 hour fire protection, bolt on modular design, and quick & easy installation.

The DuraBlast Barrier is a free standing fire and blast barrier designed to meet customer specific blast requirements.
